CASH PRICE-LIST 32

OF THE

Detroit Homœopathic Pharmacy

PURE MEDICINES,
BOOKS, MEDICINE CHESTS, VIALS,
INSTRUMENTS, POCKET CASES, GLOBULES,
ABSOLUTELY PURE ALCOHOL, MORTARS AND PESTLES,
SUGAR OF MILK, CERATES, TINCTURES,
OILS, LABELS, PLASTERS,
&c. &c. &c.

My customers will notice that there is an advance in price on some articles. This has been rendered necessary on account of the high rate of exchange. A corresponding deduction will be made as soon as the cost of imported articles is reduced. *The quotations are given subject to fluctuations according to cost.*

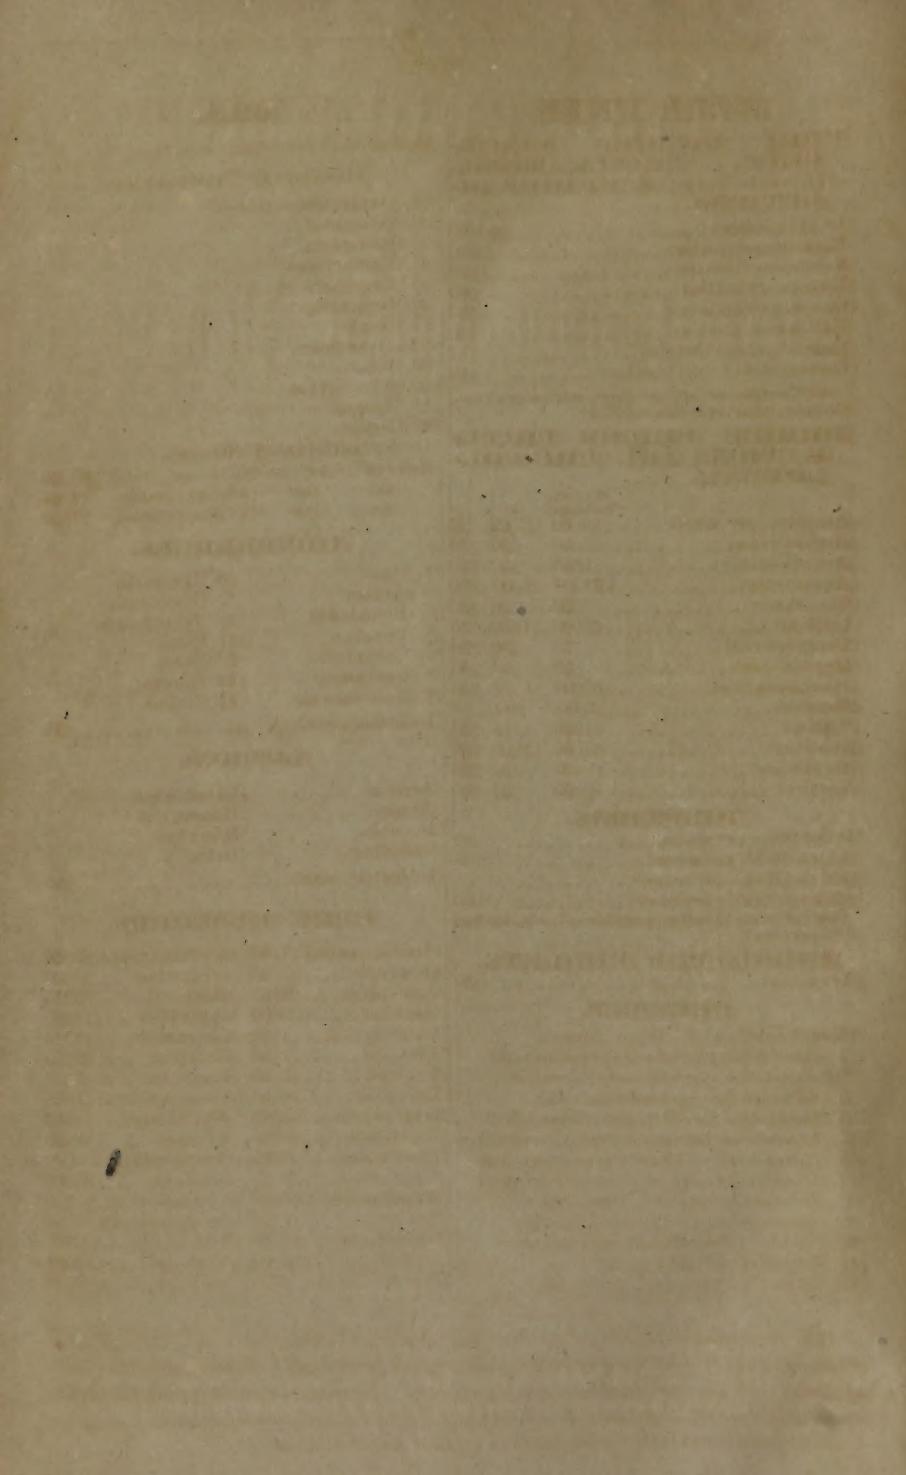

I shall continue to make the usual discount to Pharmacies and to Physicians who purchase in large quantities.

Detroit, Michigan:

EDWIN A. LODGE, M. D.,

HOMŒOPATHIC CHEMIST, IMPORTER AND PUBLISHER,

266 Jefferson Avenue.

STEREOTYPE PLATES for stamping corks with names of polychrest medi- cines, well mounted, substantial, and convenient, each,	2 50

As my Pharmacy trade has more than doubled during the last two years, and now extends throughout Canada as well as the Western States, I have been obliged to relinquish my out door practice as a Physician and expect to confine my attention to office practice and the business of a Pharmaceutist. Every order will receive my direct personal attention, and my customers can depend upon receiving just the article ordered. I never substitute dilutions for tinctures, or tinctures for triturations, but send, invariably, just the preparation requested.

INSTRUMENTS,

Surgical and other Instruments, not referred to in this list, furnished to order, at the manufacturer's catalogue prices.		
Amputating cases, Tiemann's	-	25 00

H. WILLIS'S

Patent Obstetrical Bandage and Supporter

Is one of the best and cheapest articles of the kind ever offered to the public. It is perfectly adapted to the form of the pelvis, and worn with entire ease, being free from steel or any cumbersome material.

The utility of such mechanical support to the weakly, is conceded by all.—The efficiency of this supporter has been proved in numberless cases of falling of the womb and bowels, weak back, debility, and weakness of females; also for pregnancy and parturition. We would here remark if ladies would use it for three months after confinement, months and even years of suffering might be avoided.

It has been highly recommended by our leading physicians, and in no instance has it failed to accomplish its object.

It can be sent by express or mail to any part of the country, if two measures are taken: 1st, That of the waist, and 2d, that around the person just below the projection of the hip bones.

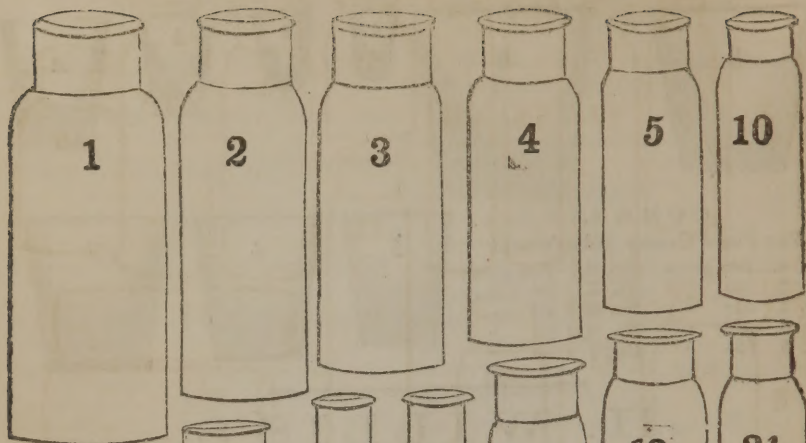

MANUAL OF HOMŒOPATHIC THEORY AND PRACTICE, BY ARTHUR LUTZE, M. D.

TRANSLATED FROM THE GERMAN, WITH ADDITIONS, BY CHARLES J. HEMPEL, M. D.

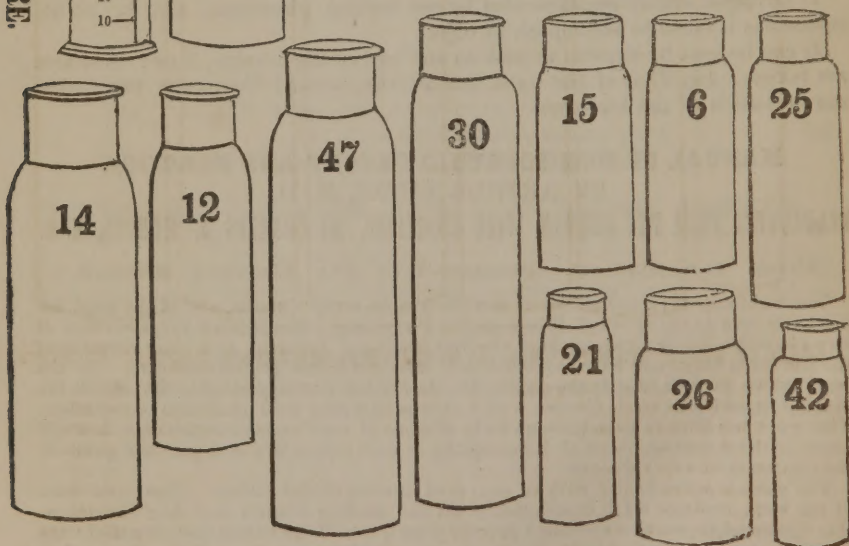

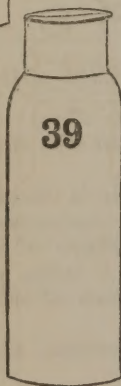

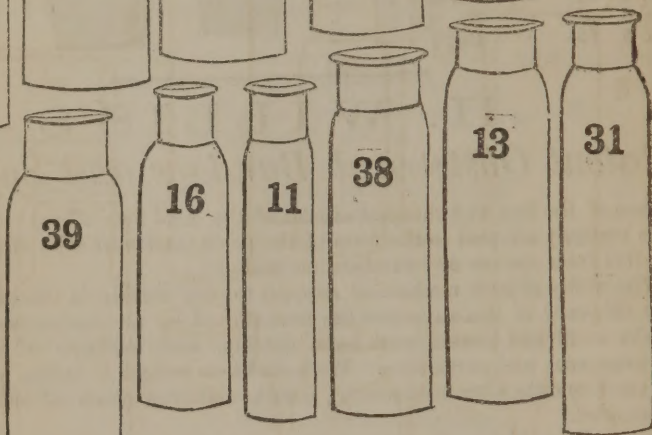

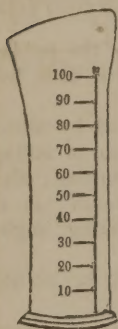

From the Sixtieth Thousand of the German Edition.

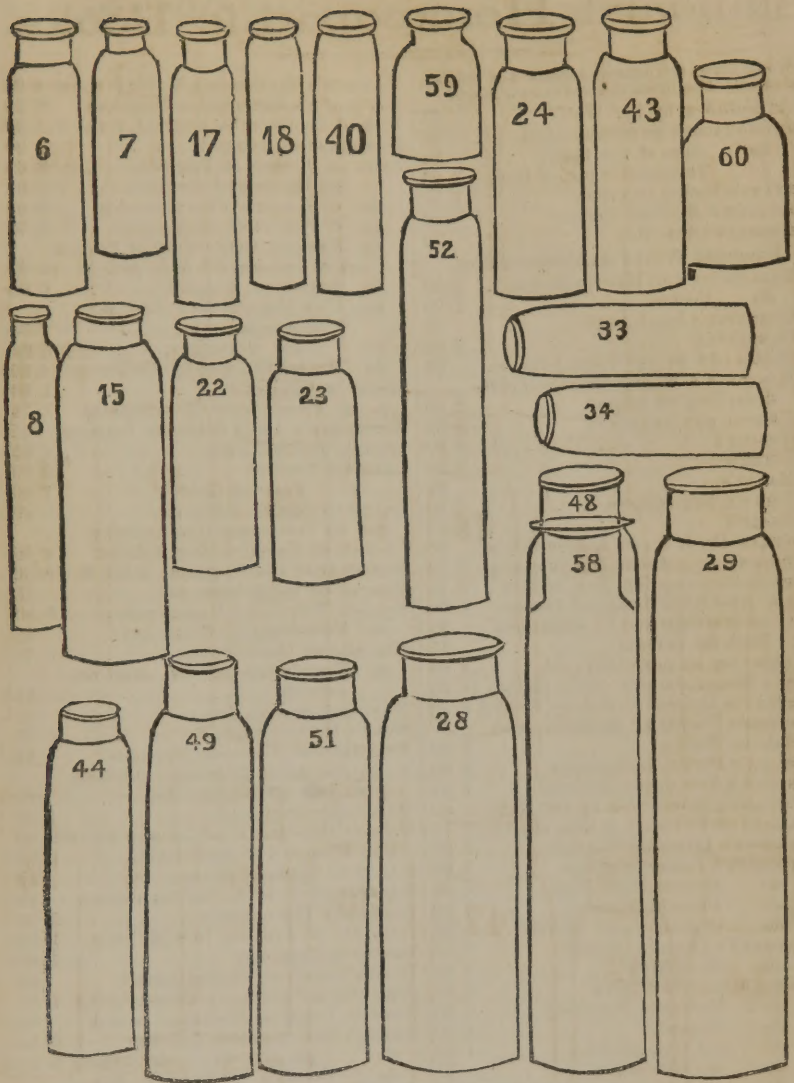

The Publisher says, the author of this work is, in many respects, one of the most remarkable men in the ranks of Homœopathic Physicians. His practice surpasses that of any physician living; thousands of the first families of Germany and other countries of the European Continent have entrusted their members to his professional care. In the work which we here offer to the public, Dr. Lutze has communicated to the world, the manner in which he treats diseases with a success that may well challenge comparison. This work has already gone through sixty editions of one thousand copies each, and will prove to the American friend of Homœopathy a most instructive and practical guide in the treatment of every disease.

The work is accompanied with an engraved likeness of the author. The first part of the work, contains a full description of all the leading diseases and their Homœopathic treatment, to which a short and popular description of the human body is added; the second part contains a repertory, where the characteristic symptoms of all the leading diseases will be found in alphabetical order, together with the names of the remedies. Price \$2 50, bound.

ON POISONS , in relation to Med. Jurisprudence, 2d Am. from rev. Eng. ed.	5 50

From the Scientific American of June 7th, 1862.

"The above engraving represents a Microscope patented by Henry Craig. It has but one lens, and therefore requires no adjustment of focus. The lens is mounted in an India-rubber disc, at the upper end of either a brass or a hard rubber tube, and the tube is provided with a mirror hung in an opening near its lower end to reflect the light upward through its axis. It is also divided by a perforated diaphragm with a small hole through the centre to prevent the interference of straggling rays. A slit is made through the tube just below the lens for the insertion of the object slides.

"These Microscopes render the blood and milk globules, as well as some of the animalcules of stagnant water, visible, and they are sold for \$2 each, or sent by mail for \$2 25."

The patent for this invention was granted Feb. 18, 1862, and further information in relation to it may be obtained by addressing Dr. LODGE, 266 Jefferson Avenue, Detroit.

Each Microscope is put up in a neat box, with full directions for using it carefully pasted on each box.

By examining the directions on the next page, the reader will find that all proper objects can be used without their being mounted, simply by placing them on the glass slide, or, if liquids, on the under surface of the lens, but as mounted objects are very convenient and always ready for use, and as inquiries have frequently been made for them, the proprietor is having one dozen from among the most interesting and beautiful objects neatly mounted and boxed, and is now prepared to fill all orders at a very low figure, as will be seen on the next page.

Testimony of the Press in regard to the value of the Craig Microscope.

The Editor of the *New-York Tribune* of March 28th, 1862, says: "Mr. Henry Craig has shown us a little microscope of great power, which is so simple that a child may use it. The fund of amusement and instruction afforded by such an instrument is illimitable, while the price at which it is furnished places it within the reach of all. For the use of Schools and Seminaries we should think it would answer all the purposes of the more costly and complex compound instruments."

The *Rochester Democrat* says: "It is a valuable little instrument, the beauty and value of which will commend it to the attention of the public at once. It is a microscope of new construction, so simple in its character and so cheap in price, as to deserve a place in every family—especially where there are children. 'The Craig Microscope,' as it is called, is adapted to popular as well as scientific use. It possesses a magnifying power of about 10,000 times, and is the only instrument of the kind which requires no focal adjustment; which makes it very convenient for the ordinary purposes of life, and particularly for the amusement and instruction of the young. It is capable of being made a never-ending source of interest. Its great peculiarity is in the lens—the rest of the instrument being similar to other microscopes. For the ordinary purposes of students and professional men, it is a great acquisition."

"THE CRAIG MICROSCOPE.—A recent invention has so simplified and cheapened the microscope, that that wonder-producing instrument is made a scientific toy for the use of children, as well as bringing it within the reach of every physician and scientific man and student."—*Rochester Daily Express*.

"Interest children? Yes, just try it, and see if your boys and girls will not be full of curiosity. Blessings, we say, upon the man who has simplified and brought within reach of the masses of the common people this beautifully mounted microscope."—*Western Olive Branch, Indianapolis*.

"The children attending our common schools would find it not only profitable, but amusing, if they would carry it with them on their little pleasure excursions, and to the joy they derive from the visible world would be added a portion from some of the 'invisible things of God.'"—*Ohio Farmer*.

One of the most useful and entertaining novelties of the day is the 'Craig Microscope.' It is one of the most perfect little instruments we have ever seen; of great simplicity; it can be used by children as an amusement, and at the same time be employed as a means of infinite instruction in searching into the secrets and wonders of nature. Every family, school and institution of learning should have one."—*The New-Yorker*.

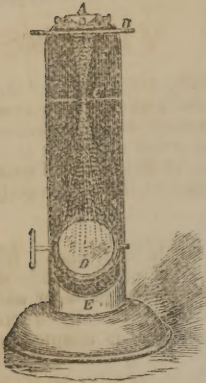

THE MICROSCOPE reveals
 "Contrivance intricate, expressed with ease,
 Where unassisted sight no beauty sees;
 The shapely limb and lubricated joint
 Within the small dimensions of a point,
 Muscle and nerve miraculously spun,
 His mighty work who speaks and it is done."

COWPER.

"The microscope tells me that in the leaves of every forest, and in the flowers of every garden, and in the waters of every rivulet, there are worlds teeming with life, and numberless as are the glories of the firmament."—
 CHALMERS.

There is now no reason why this instrument should be monopolised by scientific men, for its reasonable price brings it within the reach of all.

THE CRAIG MICROSCOPE.

DESCRIPTION OF THE MICROSCOPE. — Sectional View. A, Lens; B, Object Glass; C, Diaphragm; D, Reflector. The instrument is five inches high.

THE Microscope simplified, and adapted to popular as well as scientific use. A new optical wonder! Patented Feb. 18, 1862. This is the only instrument of high power which requires no focal adjustment, and therefore can be readily used by every one, even by children. Costing only Two Dollars, it is within the reach of all in the community, and should be on the table of every family.

This beautiful and ornamental instrument renders the blood, pus, and milk globules, and cancer cells, as well as the animalculæ of stagnant water, distinctly visible; shows the tubular structure of hair; the circulation of the blood in the web of a frog's foot; and opens up the minutiae of creation to the view of the astonished beholder, "where the unassisted sight no beauty sees." It furnishes an endless source of home amusement and instruction to every one, especially to the young.

As a Gift or Present to a friend or child, it is unsurpassed, being elegant, instructive, amusing and cheap.

There is no other Lens made like this. It magnifies about 100 diameters or 10,000 times, and, owing to its simplicity, it is invaluable for physicians, scientific men, students and schools; and for every one who is a lover of the beautiful things of nature; for it opens up an unseen kingdom to the view of the inquiring mind. It is amusing, instructive and useful.

DIRECTIONS FOR USING THE CRAIG MICROSCOPE.

To examine any fluid, such as stagnant water, blood, milk or pus, lift a small drop on the eye of a darning-needle or small stick, and place it on the under side of the lens, right on the centre—the smaller the drop the better. If you wish to see the globules of blood, pus or milk, these fluids should be largely diluted with water. After placing the fluid to be examined, on the under side of the lens, place the latter on the top of the instrument, and then stand the latter so that the mirror will directly face the light, and turn the mirror until the light is reflected up the body of the instrument on the lens, when the objects contained in the fluid will become visible; if not, turn the instrument to the right or left a trifle, and turn the mirror until it is right. For dry objects, such as hair, flies' or spiders' feet, the wings of insects, scales from the wings of moths, etc., place them on the small slip of glass under the lens. When examining a drop of fluid, the slip of glass is not required. If you wish to examine the circulation in the web of a frog's foot, place the under surface of the lens directly in contact with the under surface of the web of the foot, and then place the foot on the top of the instrument, or else simply hold it up to the light.

Objects can be had, mounted, of most of the opticians; if not mounted with too great a thickness of glass between the objects and the lens so as to prevent getting the former in the focus, they will answer well, otherwise they are not suited for the high magnifying power of this Microscope. Remember that the nearer the object is in contact with the under surface of the lens, the better the view.

This Microscope will be sent by mail, postage paid, on the receipt of Two Dollars and Twenty-five cents; or, for Three Dollars the Microscope and six mounted objects will be sent, postage paid. A box containing one dozen different mounted objects will be sent by mail, postage paid, on the receipt of One Dollar and a-half. Address

DR. LODGE,
266 Jefferson Avenue, Detroit.

Agents are wanted in every city and town where one does not already exist. A liberal discount to dealers.

DR. LODGE'S PUBLICATIONS,

A Complete and Comprehensive Monograph upon

CELSEMINUM SEMPER VIRENS,

BY EDWIN M. HALE, M. D.

Author of a Practical work on Abortion; Associate Editor of the North American Journal of Homœopathy; Vice President of the Michigan Homœopathic Institute, etc.,

THE above work is as complete and exhaustive as our knowledge of this new and wonderful remedy will permit. It is a complete *resume* of its physiological and pathogenetic action, with copious clinical remarks and deductions.

It contains 60 large 8vo pages, printed on superfine paper, and contains a truthful engraving of a terminal flowering branch of the plant. A few copies are prepared with blank leaves for the recording of pathogenetic or clinical experience, covered in a substantial manner.

The peculiar and specific character of the remedy make it indicated in many forms of disease not amenable to the ordinary medicines.

We feel justified in commending this Monograph to the profession as a standard treatise upon the GELSEMINUM. Its reliable practical character makes it a valuable guide in the administration of the remedy, in all the diseases for which it is appropriate. The retail price of the Work with engraving, is 50 cents. Sent by mail postage free on receipt of price.

DR. LODGE invites the attention of the profession to the following preparations of Gelseminum, all of which may be relied upon for their purity and value in the diseases indicated: Gelseminum Mother Tincture, the best that can be obtained anywhere; Gelsemin, in triturations from the first up to any required strength; Gelseminum Semper Virens, in dilutions from the first up to any potency desired; Gelseminum Cerate, for painful cutaneous diseases, ulcers, boils, erysipelas, psoriasis, felons, &c.; Gelseminum Lotion, for Neuralgia and Rheumatic pains, Urticaria, Erysipelas, &c., &c.; Glycerole of Gelseminum, a valuable external application to painful urticaria, psoriasis, eczema, boils, painful ulcers, neuralgia with great sensitiveness of the surface, inflamed hæmorrhoids; also in *rigidity of the os uteri during labor*.

SOLDIERS' AND TRAVELLERS' MANUAL—A guide for the administration of Homœopathic Medicines, By EDWIN M. HALE, M. D., Editor North American Journal of Homœopathy, &c., Vice President Michigan Institute, of Homœopathy, &c.

LIST OF DISEASES TREATED OF IN THIS MANUAL.

FEVERS—from a cold, Yellow, Typhoid, Intermittent, Scarlet.

GENERAL DISEASES—Measles, Mumps, Scurvy, Chilblains, Rheumatism, Bleeding, Wounds and Bruises, Erysipelas, Itch, Ulcers, Burns, Scalds, &c., Weakness, Neuralgia.

HEAD—Brain Fever, Headache, Eyes, inflammation of, Eyes foreign substances in, Nose, Catarrh, Nose, Bleeding from.

DISEASES OF THROAT—Quinsy, Hoarseness, Diphtheria, Influenza, Croup

LUNGS—Inflammation of, Bleeding from, Cough,

Asthma, Pleurisy.

STOMACH—Inflammation of, Vomiting, Dyspepsia, Billiousness, Cramps in, Heartburn.

BOWELS—Inflammation of, Colic, Dysentery, Piles, Diarrhœa, Constipation.

DISEASES OF URINARY AND SEXUAL ORGANS—Suppression of Urine, Painful Urination, Spermatorrhœa.

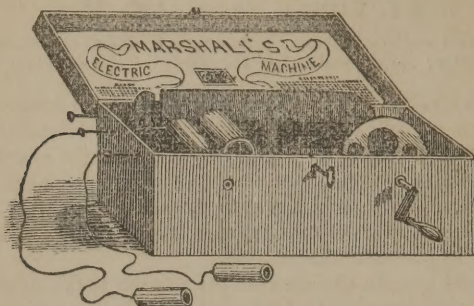

STINGS OF INSECTS, Bites of Serpents, &c., Mercurial Poisoning, Sun Stroke, Cholera Morbus and Cholera.

Price of Book and compact Case of 12 medicines complete, Two Dollars. Sent by mail prepaid to any part of the United States on receipt of price in U. S. notes or Stamps. ~~At~~ A liberal discount where a quantity of Books and Cases are ordered at the same time. Price of Books \$10.00 per 100. Single copy 15 cents. Cases with vials corked, labeled and stamped, and Book \$9 00 per dozen. Filled with Medicines complete \$12 00 per dozen. Concentrated Tincture of Arnica in strong vials \$1 50 per dozen.

MARSHALL'S IMPROVED COMPOUND MAGNETO-ELECTRIC MACHINE.

For Medical and Dental Purposes. Patented August 9, 1859.

PRICE \$8.50.

DIRECTIONS FOR USING THE MACHINE.

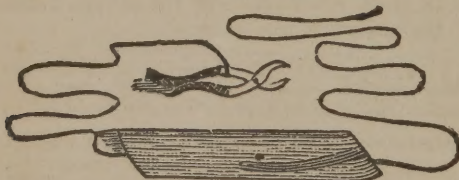

Connect the handles with the sockets at the left end of the box by the cords within them. Apply the handles so that that part of the person through which it is desired to pass the current of electricity may be between them.

Regulate the strength of the current by the speed of the crank, and by drawing the knob at the end of the box (outside). After having used the machine, it is better to leave the armature attached to the knob, on the magnet. The current may be prevented from passing through the hands by the use of gloves, and will be less unpleasant if wet sponges are placed in the ends of the handles, and then applied to the skin, as they prevent the pricking sensation. The bearings and springs should be occasionally oiled and cleaned.

Should the spools rub against the magnet when revolving, loosen the screw on the front side of the Box a very little, and tighten the one on the back side in the same proportion, until the spools revolve freely; then apply the screw driver to the milled edge of the button screws inside, and tighten them by a few raps with a hammer. If no current should be felt while operating the machine, turn the crank in the opposite direction for a few seconds, by which movement any particles of dust that may have collected under the springs which bear on the armature, will be removed. The Positive and Negative Poles may be easily distinguished by holding the handles in the hands, and changing them from one to the other, when the most pain and contraction will be felt in the wrist of the hand grasping the Negative handle. Also, by the letters P and N over the sockets which receive the conductors.

THE DENTIST'S FOOT-BOARD.

PRICE \$1.50.

It is a most admirable and simple arrangement for Dentists who use the Machine for extracting Teeth, as they have only to place the Board on the floor, connect the cords with the Machine and the Forceps, press the foot on the spring, and on the instant the current passes the tooth is extracted without pain.

SPECIAL NOTICE.

It will be observed that this is the only Magneto Electric Machine which combines the *Alternating* and single or *Direct* currents in such a manner as to be converted with the utmost facility and certainty from one to the other, thus giving it a much more extended adaptation to the treatment of disease as well as constituting it a complete and reliable philosophical instrument.

The single current always passes in one direction.

In the Alternating current every successive shock is reversed.

The Single Current is adapted to the treatment of all affections dependent upon faults either of the motor or sensory nerves distinctively, while the Alternating current (being the only one produced by most of the machines in the market,) is only adapted to the treatment of mixed cases where both kinds of nerves are implicated, as one shock principally affects the nerves of motion and the next those of sensation.

This machine, with the *Single* current, may be used for Electro Plating.

Also, by Dentists with the Foot Board for the purpose of avoiding pain in the extraction of teeth which it accomplishes in the most satisfactory manner.

The recent improvements in this Machine made by Mr. Marshall, for which a Patent has been granted, render it perfect beyond comparison with any other instrument ever constructed.

V-528
